Professional Summary

Final-year AI & Data Science engineering student with **4 internships** and **7 engineering projects** spanning real-time data streaming, event-driven platforms, computer vision, and enterprise applications. Passionate about end-to-end ownership, from CI/CD automation to production deployment.

Professional Experience

Felblad · *AI Software Engineer* — Remote / Tunisia · **2026**

- Single-handedly designed, built, and delivered the **Charik.tn** platform from concept to production.
- Implemented backend business logic with Spring Boot and connected a responsive Angular frontend to a MySQL database.
- Integrated an AI-powered matching engine that intelligently pairs users on the platform.

Tunisie Telecom · *AI & Data Analytics Intern* — Tunisia · **2026**

- Developed an analytics and dashboarding solution with Python and Pandas to track power consumption across infrastructure.
- Integrated an AI-based anomaly detection model to automatically flag abnormal power consumption patterns.
- Generated interactive visualizations and indicators to support data-driven operational decisions.

Beehive Enterprises · *DevOps & AI Intern* — Tunisia · **2025 – 2026**

- Built and deployed CI/CD pipelines integrating **5 tools**: Jenkins, Docker, SonarQube, Nexus, and Harbor.
- Automated containerization workflows and enforced infrastructure deployment best practices.
- Integrated AI-assisted analysis into the pipelines to support code quality and release decisions.

Canadian System Technologies (CST Enterprise) · *AI Software Engineering Intern* — Tunisia · **Summer 2025**

- Independently developed **Chronovia Store**, a full-featured e-commerce app using React, Spring Boot, TypeScript, and PostgreSQL.
- Delivered **4 core modules**: product catalog, user authentication, shopping cart, and admin dashboards.
- Added AI-driven features to enhance the shopping experience, such as personalized product recommendations.

Key Engineering Projects

Khatwa – AI Platform Against Youth Unemployment in Tunisia

Team project (5 members)

Python, LangChain, PostgreSQL + pgvector, Angular, Spring Boot, JWT Auth, Tailwind, FR / AR (RTL)

Platform serving **4 user roles** (idea owners, talents, companies, investors) with **3 AI features**: talent-project matching, CV parsing that auto-fills profiles, and automatic document summarization. Validated contributions become verified experience for hiring and investment. Bilingual (**2 languages**) FR / AR with RTL layout.

Real-Time Streaming Data Warehouse

PostgreSQL, Debezium, Kafka, Spark, ClickHouse, Streamlit

Built a **6-stage** real-time CDC pipeline streaming PostgreSQL changes (Debezium, Kafka, Spark) into ClickHouse, powering a live Streamlit dashboard.

Live Threat Detection System

FastAPI, PySpark, Apache Kafka, Docker Compose

Engineered an event-driven SecOps platform that monitors live server log streams for anomalies, using PySpark, FastAPI, and containerized microservices.

CampusHub – Agentic University App

Express.js, Python, LangChain, Ollama, NVIDIA NIM, MongoDB

Built an agentic portal where students track attendance and justify absences via computer vision agents. Integrated local Ollama and NVIDIA NIM models to automate administrative workflows.

Bayan – SaaS Sales Dashboards

FastAPI, Angular, PostgreSQL, Keycloak, ECharts, Konnect

Built a multi-tenant dashboard platform with automated schema mapping (semantic matching, GPU-hosted LLM fallback), Keycloak OIDC auth, and usage-based Konnect payments.

Eye See – Smart Glasses for the Visually Impaired

Computer Vision, Wearable Hardware, Obstacle Detection

Designed an assistive wearable with a glasses-mounted camera that detects obstacles in real time and guides users with auditory/haptic feedback.

Derja Subs – Tunisian Dialect Subtitle Studio

FastAPI, React, Remotion, Whisper ASR, ffmpeg

Built a captioning tool that transcribes spoken Tunisian Derja into word-level timestamped subtitles with customizable styles.

Education

Engineering Degree in AI & Data Science (Final Year)

Technical Skills

Programming	Python, Java, JavaScript / TypeScript, C / C++, Dart, Data Structures, Algorithms, OOP
Data Engineering	Apache Spark, Apache Kafka, ClickHouse, Debezium CDC, PostgreSQL, MySQL, NoSQL
AI & ML	PyTorch, Hugging Face Transformers, LangChain, Computer Vision, NLP, LLM Fine-tuning
Web & Mobile	Spring Boot, Angular, React, Express.js, Flutter, Tailwind CSS, REST APIs
DevOps & Tools	Docker, Kubernetes, Jenkins, Git, Linux, SonarQube, AWS Data Engineering (Certified)
Spoken Languages	Arabic (Native) · French (C2) · English (C2)
